Markus Vinke | Managing Director of the TIS GmbH

The Technische Informationssysteme GmbH

is a medium-sized family company from Westmünsterland. TIS has many years of experience and highly competent employees, whose greatest motivation is customer satisfaction.

History

TIS GmbH was founded in December 1985 by graduated engineer Josef Bielefeld. The company started in the field of radio technology and developed special hardware. Since 1994, the IT specialists focused on the transport and logistics industry and became a key knowledge holder in the field of mobile hardware and software development.
Josef Bielefeld led the company as managing partner until September 2016. Then he handed over the management to long-time employee Markus Vinke. The electrical engineering graduate had already been gathering experience at TIS since 2001, initially as a software developer and project manager, and later as head of software development.
However, TIS GmbH continues to be family-owned. In addition to Josef Bielefeld, his son Fabian Bielefeld has also been a partner since 2018.
In 2013, TIS moved into a newly erected building, the so-called "TIS Tower". The modern and employee-friendly structure is located in the Technology Park Bocholt next to the Westphalian University of Applied Sciences. In 2020, the building was extended by an annex to create more space for the ever-growing company. Combined, the two buildings offer space for around 100 employees.

Products

TIS has been making a significant contribution to the development and improvement of mobile technologies for years. TIS GmbH conducts independent trend research because the telematics provider wants to proactively meet the challenges of tomorrow already today.
Three product families have emerged from this research process.

These product families enable TIS GmbH to offer customers an all-round solution:

TISLOG®	TISWARE®	TISPLUS®
is an innovative, platform-independent software solution for the transport and logistics industry.	are devices and software from suppliers. TIS GmbH offers them to its customers after careful selection and testing.	is the umbrella brand for value-added accessories from the company's own hardware development.

Product philosophy

TIS GmbH pursues a clear goal with its products. The provider wants to offer customers the optimal solution for their company. To do this, the existing product is individually adapted completely to the needs on site. This may sound complicated and cumbersome, but it is not. Thanks to years of experience in the field of transport and logistics and the large development and project planning department the IT-specialists offer the optimum basis for successful project implementation - all from a single source.
In doing so, TIS GmbH responds to the needs and requirements of the customers, advises them in detail, works together with them on the project and takes responsibility for the implementation at all times.
Even afterwards, when the system is already successfully in use, the provider continues to look after its customers. After all, it is important to TIS that the system can be used for many years to come.
For this reason, the company relies on the TISLOG Community, which enables continuous exchange with customers and collaboration on innovations. The resulting developments offer customers long-term planning with investment security.

Project work

Several decades of experience and project implementations in transport and logistics environments make TIS GmbH a competent partner. The know-how and the technical competence enable outstanding quality of hardware, software and service products.
TIS offers competent project management for the various components and coordinates all individual steps within the implementation of individual solutions taking full responsibility for the results. The work is characterized by enthusiasm for technology and the goal of finding economical and practical solutions for the everyday challenges of our customers.

Supporting our customers as a strong partner

PHASE 1
Requirement Analysis

*TIS supports you with advice and concept design customized to YOUR business.*

PHASE 5
New Solutions & New Possibilities

When the project control cycle starts over again with a new generation of equipment, we work with you to find new solutions.
