TISLOG Download-Terminal

With the TISLOG Download Terminal, you or your drivers can independently read driver cards and carry out driver's license checks. The data from the driver card is immediately listed in the TISLOG tachograph archive after reading, and the driver's license check is displayed in the TISLOG deadline check module.
This process is completely digital and so easy that drivers can do it themselves. In addition, driver master data can be easily edited on the Download Terminal. The terminal consists of a holder and a mobile device. The holder has a slot for the driver card. The device is also capable of reading an NFC chip that is affixed to the driver's license.
 The NFC chip is automatically assigned to the corresponding driver's license. For practical use, the TISLOG Download Terminal can be easily mounted on a wall. Otherwise, only a power outlet is required for power supply. Thanks to the prior configuration, commissioning is child's play – simply connect to the power supply and you're ready to go.

YOUR ADVANTAGE

- Download driver card and check driver's license in a terminal
- All-inclusive package – no additional costs for 5 years
- Integrated SIM card for 5 years
- Administration via MDM
- IT security updates for 5 years

Leistungsmerkmale

1.   Read-out of driver card

There is a slot at the bottom of the terminal where you can insert the driver card. The data from the driver card is then downloaded and processed in the tachograph archive. The data is transmitted directly to the tachograph archive via radio (recommendation: WiFi, but also possible via the integrated SIM card).
All driver cards currently available on the market are supported.

2.   Driver's license control

Once the driver's license has been equipped with an NFC chip and the chip has been successfully assigned to the driver, the license can be checked using the TISLOG Download Terminal. To do this, simply hold the driver's license against the back of the mobile device. The driver's license check is processed in the TISLOG Appointment Check module. The TISLOG tachograph archive shows when the last check was carried out and when the next one is due. It also shows when the last driver's license check was carried out and when the next one is due. (The driver's license check is a paid add-on module in TISLOG office Infodesk).

3.   Maintenance of master data

Infodesk Authorized users can log in to the mobile device with their login details and then maintain driver master data.
At the terminal itself, you can
- Assign driver's licenses and NFC tags
- Update driver and driver's license data
- Create new drivers

4.   Data communication via Wi-Fi and SIM card

The download terminal can be easily connected to Wi-Fi and is then immediately ready for use.
Alternatively, it can also be used with the integrated SIM card. Integration into your own infrastructure via Wi-Fi is recommended. If this is not possible, the SIM card can be used via Plug & Play.

5.   5 years of comprehensive service

At the heart of the terminal is an enterprise smartphone designed for use in harsh environments.
The download terminal also includes a unique 5-year service covering the following:
- Repairs, including damage caused by force (except for total loss)
- Software and security updates
- SIM card communication

6.   Security features

The Download Terminal offers the following scope:
- Support and installation of security and software updates via mobile device management
- Android updates for 5 years (security patches, feature updates)
- TISLOG mobile updates
- MDM updates

Introductory price: 995€ / no running costs
