

TISPLUS SNAP-ON ADAPTER

TISPLUS Snap-on Adapter for several handhelds

for integration of transponders and Smart Card Readers

The experts at TIS have developed special cases for integration of different transponders or Smart Card Readers into Mobile Data Terminals. TISPLUS Snap-on adapters for integration of transponders are available for Zebra MC55/65/67 and MC95. The TISPLUS Snap-on adapters for Zebra MC55/65/67 are also suited for the integration of Smart Card Readers.

(Transponder) for MC55/65/67

TISPLUS Snap-on Adapter
(Smart Card Reader) for MC55/65/67

AT A GLANCE

- For integration of active transponders or Smart Card Readers
- The transponder is powered by the main battery of the mobile data terminals
- The warranty for mobile devices is maintained

Transponders allow for locating of devices within buildings. Smart Card Readers for example allow reading and writing of chip cards, such as driver cards.

Transponders are usually mounted on top of the mobile computers, and then sustained by their own on-board battery. TIS has developed special boards which connect the transponder with the interface of the mobile computer in the TISPLUS Snap-on housing.

Thus no separate power supply is necessary for the transponders - they are powered via the mobile device. The warranty for mobile devices is not affected by the conversion to the Snap-on adapter.
