# KNOW-HOW
## AND EXPERTISE
### FOR YOUR SUCCESS!

## THE COMPANY

TIS Technische Informationssysteme GmbH

# The Technische Informationssysteme GmbH

The Technische Informationssysteme GmbH was founded in December 1985 by Dipl.-Ing. Josef Bielefeld.
The company established its position as an important developer and specialist in the field of mobile hard- and software.
Considerable expertise in the development of data processing systems and funded knowledge make TIS a qualified and reliable business partner for the development of innovative products as well as for assisting you with your project work.

Josef Bielefeld led the company as managing director until September 2016. In 2008, Peter Giesekus joined the company as the second managing director, responsible for sales and marketing, while Josef Bielefeld concentrated on the technical area. In October 2016 Josef Bielefeld handed over his part of the management to Markus Vinke. The Dipl.-Ingenieur for Electrical Engineering, at that time working for TIS GmbH for 15 years already, gained experience as a software developer and project manager. In 2012, he took over the management of the software development department.

## Core Competence

The company TIS covers all fields of wireless communication technology and is ambitiously and passionately involved with supporting the progress in this field and has been a specialist in mobile data communication for more than 30 years.
WWAN, WLAN, local area radio or RFID - as a cutting-edge innovation leader the company is well-experienced in projects of enterprises of all sizes and familiar with all of the leading radio technologies.
Based on these technologies and knowledge, interdisciplinary teams at TIS are developing and realizing powerful solutions for the business workday.
Wherever you want to control and improve processes for an optimized efficiency, wherever you want to use wireless data communication - TIS is the partner for you.
We at TIS process our ideas and offer you technologies that can be adjusted to your system demands optimally and reliably.
The latest generations of products are the platform-independent Software solutions under the brand name TISLOG and TISPLUS as the brand for value-added hardware developments.

# The Staff

TIS employees are profoundly competent in mobile applications and all associated fields. TIS products always meet the latest standards of data communication. Very often TIS is already involved in the development of basic technologies and also in the definition processes of industrial standards.
More than 20 engineers and software specialists are responsible for development and production of Hard- and Software at TIS.

Our company trusts in advanced training and further development of our employees, leading to a continuous level in quality, innovative ideas and maximized staff retention.

# Projects

Our work is characterized by the passion for technology - and the aim to find really viable and economical solutions for the everyday challenges of our customers.

TIS expertise and technical know-how enables outstanding quality in Hardware, Software and Service products.
For the different components TIS is offering competent project management and coordination of every single step within the scope of individual solutions, including full responsibility for the results. In order to guarantee smoothly running processes, TIS is offering modern, competent and individual service for our entire product range.
Service contracts are custom-tailored to the special needs of our customers.

# Products

For years the TIS GmbH is significantly contributing in the development and improvement of mobile technology. TIS conducts independent trend research - to be able to meet the challenges of tomorrow proactively already today.
This has developed into 3 product families.
TISLOG stands for our innovative platform-independent software solutions.
TISWARE represents devices and software of our suppliers, we offer to our customers after completing a proven selection process.
TISPLUS is the umbrella brand for value-added accessories from our own hardware development.
