Mobile Enterprise Productivity Suite
Unified Solutions for Greater Performance

Mobility is no longer being deployed in pockets of the enterprise, nor as an experimental project to determine if mobile workers can be more productive. As mobility has shifted into the mainstream for corporations large and small, the requirements have changed. Point products that address a specific use case are no longer the desired approach. Enterprises need unified solutions that enable greater productivity for mobile users across business functions. IT departments increasingly search for solution vendors that can simplify their mobility needs—reducing deployment complexity and transitioning enterprise mobile deployments from a reactive "quick-fix" for a single task into a unified IT strategy.

The Mobile Enterprise Productivity Suite from Wavelink offers solutions that are designed to work together— and actually augment the capabilities of each other—ultimately maximizing the capabilities of enterprise mobile applications and the workers who rely on them.

Application Streaming

Wavelink application streaming solutions accelerate mobility deployments by eliminating the costs to develop mobile clients for host-interface applications. Compatible with and recommended by all leading Supply Chain Management (SCM) systems, Wavelink makes it easy to access and update information on these systems through Terminal Emulation and browser-based clients available for major mobile operating systems, including Android, iOS and Windows Mobile/CE. Beyond mobile client readiness and host system compatibility, Wavelink application streaming solutions protect your corporate data by providing a window into host-based data, rather than storing that data on the mobile device.

Terminal Emulation
Long the linchpin of mission-critical mobile applications, Wavelink Terminal Emulation (TE) provides a reliable, proven solution for host-interface mobility embraced by enterprises across the globe. Sixty-eight percent of rugged mobile computers in use worldwide run Wavelink TE, and with TE clients for both Android and iOS, companies continue to enable more mobile users to access vital SCM information from this versatile mobile client.

Velocity
Empower your workforce to get more done during a shift by arming them with the latest mobile devices. However, you must ensure that the mobile applications are equally up to the task. Velocity is designed to take full advantage of the touchscreen interface and features found in today's mobile devices, placing familiar touch-based navigation and control at workers' fingertips. Velocity modernizes your existing telnet application into a touch-navigation interface automatically, improving speed and accuracy for increased productivity.

VelocityCE
Browser-based solutions are a great way to enable mobile users to access corporate SCM systems across an increasingly diverse set of mobile devices and operating systems. The Wavelink Velocity CE mobile experience outperforms traditional browsers. Faster screen rendering and integrated technology hooks make it easy to add advanced data capture capabilities like barcode scanning, helping mobile users work faster.

Voice Enablement

Speakeasy

The fastest and most cost-effective way to voice-enable your mobile workers. It complements data collection via barcode scanning, RFID, and key-entry by enabling voice-based data entry (speech-to-text) as well as voice direction from an application (text-to-speech). Designed in conjunction with Wavelink application streaming products, Speakeasy can be added easily to Wavelink TE and Velocity* deployments, ensuring complete compatibility. Speakeasy is redefining voice enablement by eliminating complexities such as voice middleware, dedicated voice servers, and proprietary voice hardware that legacy voice applications require. Enterprises that choose Speakeasy gain the benefits of a full-featured voice-enablement solution without extended deployment projects. Many Speakeasy deployments are completed in 30 days or less.

Not available at initial release. Contact your Wavelink representative for availability.

Enterprise Mobility Management

Avalanche

When you consider all the aspects of an enterprise mobility deployment, choosing a solution to manage that deployment also encompasses selecting the enterprise mobility management utility that can manage not just the mobile device but all the aspects that maximize the productivity of the mobile worker—mobile applications, content access, and printers. Comprehensive enterprise mobility management through Avalanche ensures workers leverage the most from mobility, and also eases mobile deployment management for the administrator, delivering the most efficient means to update mobile applications on workers' devices.

From Point Products to Mobility Strategy

Mobility solutions are becoming strategic for businesses. Narrow-focused, opportunistic point products are no longer proving beneficial for long-term business performance, and along with their disconnected support, are being replaced by unified solutions that deliver comprehensive capabilities for mission-critical enterprise mobility. The solutions in the Wavelink Mobile Enterprise Productivity Suite work together and augment the capabilities of each other—maximizing the capabilities of enterprise mobile applications and the workers who rely on them.

Explore how the Wavelink Mobile Enterprise Productivity Suite can improve productivity across your enterprise. Whether your objective is more accurate decision-making, improved customer service, greater operational efficiency, optimized data security, or that elusive boost in operating margin, let Wavelink help you shape a mobility strategy that meets your goals.

About Wavelink

Wavelink accelerates mobile productivity with solutions that enable supply chain operations. Global organizations across industries such as manufacturing, retail, warehousing, and field force automation rely on Wavelink enterprise mobility management, host-connectivity applications, and voice-enablement solutions to connect mobile devices to supply chain management systems. Wavelink products help ensure worker productivity in mission-critical mobile deployments, resulting in reduced costs that can contribute directly to operating margin. Visit www.wavelink.com.
