ENTERPRISE MOBILITY MANAGEMENT

Taking Mobility to Endless Possibilities

MobiControl

EMM Product Solution

Business mobility is complicated and becoming more so. More workers outside the office and more device types; makes, models and operating systems, are making it more important than ever to manage and secure your company's mobile devices. On top of this, your mobile workers need to be as productive on the road as they are in the office. They need access to key business applications and important company content. To keep up with all this change, your company needs a business mobility strategy, and a top-notch Enterprise Mobility Management (EMM) solution to support it. SOTI removes the complexity from managing a multi-OS, multi-vendor, and multi-purpose mobile business environment. SOTI MobiControl is an end-to-end EMM solution that manages mobile devices, applications, content, and security from within a single management console.

Device Provisioning

Get Your Users Up and Running Faster

Organizations are dynamic; new hires, promotions, job changes, and departures keep IT staff on their toes. Different mobile requirements for remote workers, contract employees, knowledge workers, and blue collar employees add even more complexity to the IT challenge of deploying devices to support business mobility. SOTI MobiControl Stage delivers intelligent policy management. We enable IT staff to customize policies to meet the changing needs of your business. User by user, or role by role - in policy groups of hundreds or thousands, SOTI can provision and configure device features and configurations to let you rollout new devices faster with less effort and fewer errors.

Device Enrollment

Manage your Mobile Users Easier

Device enrollment can present a challenge for IT departments that are tasked with provisioning large numbers of devices across different areas of the business and different geographic locations. Administrators must enroll new devices with full security, application policies, device configurations, and enterprise resources, while dealing with management pressure and user expectations for rapid availability. SOTI MobiControl makes device enrollment easy, regardless of device, operating system, or deployment model. We support the enrollment programs from Apple, Google, and Microsoft and MobiControl Stage makes it even easier; integrating with the Apple Device Enrollment Program (DEP) and Google Android for Work and enabling Express Enrollment via barcode scan.

Device Management

Eliminate Business Mobility Complexity

Business mobility is a complex management challenge. Laptop, Smartphone or tablet? BYOD vs. Corporate liable? Android, Windows or iOS? The permutations and combinations are endless. Businesses want an EMM solution that is device and OS independent; able to support their business requirements for one type of device, or many. SOTI is completely device and operating system agnostic. We manage your entire mobile device deployment no matter how complicated or dynamic. To make it easier for you, SOTI runs an in-house device certification program to ensure that new hardware, and operating systems work as expected.

Device Security & Compliance

Keep your Devices Safe and Secure

Security is a journey, not a destination. In today's business world you must do everything you can to maximize mobile security, and keep continuing to do so. You need a comprehensive mobile security solution that delivers all of the required security elements; physical, network, data and device security. You need a flexible mobile security solution that can adapt to new security threats before they become a problem. SOTI EMM does it all, security is our middle name. We enforce device authentication, data encryption and manage certificates to prevent unauthorized device use and data loss. SOTI supports containerization to assure regulatory compliance, and prevent the misuse of valuable company assets. We track lost or stolen devices, and can shut them down or remote wipe them in the field if required.

Application Management

Empower Employees with Corporate Application

Applications are one of the main drivers behind the success of business mobility. It started with simple apps like email and calendaring, and today businesses rely on mobile Line-of-Business (LOB) applications, ERP and SFA solutions to empower their mobile workers and keep them productive on the road. Application management can be extremely complicated; provisioning what apps are allowed on what device, managing updates, and configuring settings is ongoing. SOTI delivers a comprehensive suite of mobile application management features. We enable over-the-air distribution, configuration, updating, and removal of apps from your enterprise library or public app store. For mandatory business apps, we can install/remove apps in the background, without the user even being aware of what is going on, and whitelists/blacklists provide an extra layer of control. SOTI gives your business a fully unified, fully curated application experience.

Content Management

Secure Access to Corporate Content

Mobile workers need access to company content; reports, forms, files and data, wherever they are. SOTI MobiControl Secure Content Library is the perfect solution for securely distributing and managing corporate content to your mobile workforce. Supporting all major formats, files can be seamlessly delivered one-to-one, one-to-many or one-to-all. Secure Content Library gives you fine-grained control over your content, allowing administrators to set priority levels, document expiry, and location-based delivery. In addition, your business files can be searched, filtered, sorted and grouped with tags making it easy for mobile workers to access the documents they want quickly and easily.

Device Retirement

End the Life of your Devices Properly

It is important to properly retire or re-purpose a device when a user changes roles or leaves your organization. You need to remove all corporate content and applications from the device, wipe WiFi and VPN settings, and remove the device from your MDM enrollment database. SOTI provides easy, automatic device retirement; devices can be retired with the touch of a button and with a minimum amount of end user involvement. IT administrators can wipe corporate partitions, de-provision access to corporate resources, and un-enroll BYOD devices from active management. Using over-the-air backup and device wipe, IT can stay on top of changes in the organization and ensure devices are re-purposed or retired according to corporate policy.

SOTI is a proven product innovator and EMM Industry leader. Over 15,000 customers across 170 countries rely on SOTI for their EMM needs. We empower the enterprise to take mobility to endless possibilities.
