BACKGROUND TIS GMBH

The TIS GmbH, based in Bocholt is one of the market leaders for sophisticated telematics projects. TIS stands for "Technical Information Systems". Since 1985 the company develops intelligent telematics solutions for freight forwarders, transport and logistics companies and retail chains. Currently, more than 50 employees work for TIS. The latest generation of products are the platform-independent software solutions under the brand name TISLOG Logistics & Mobility. Together with the powerful hardware of renowned partners and the in-house developed hardware accessories TISLOG builds the optimal solution for companies looking for professional telematics solutions.

Velocity Browser

Web applications have a long and proven history. You've invested in these systems, and want to be sure you can leverage them, even as you explore a new, expanding generation of mobile device hardware—including Android-based options—for your workforce.

The challenge is, you've been running WinCE or Windows Mobile for a device generation or two. How do you bring that mobile interface forward to fully leverage the touchscreen experience offered on today's growing selection of Android mobile computers? The Velocity Browser from Wavelink is your answer.

Bring Your Existing Web Host Forward

Your existing web-based supply chain management (SCM) system is ready for your next-generation mobile devices. Whether SAP ITSMobile, Manhattan WMS, or one of the other leading web-based host systems, you can deploy without changes to your host.

Improve Workflows to Maximize Productivity

The Wavelink Velocity console's advanced scripting capabilities let you optimize task workflows, helping workers be more productive. Parse barcoded data into fields, highlight important information on the fly, customize audible tones for alerts, errors, etc., and more.

Keep Workers Focused on Tasks

Don't let Web browsers cause security concerns. Keep workers out of browser controls and focused on the task at hand.

Mobilize Screens You Couldn't Before

With CSS inserts, you can reformat screens easily for mobile access. Take web application screens that were previously only helpful on a desktop and deliver them to your mobile workers in a clear, mobile-friendly format.

Deploy Easily

Bringing your web apps to the Velocity platform is easy. Similar to modernizing terminal emulation, your Velocity implementation for web applications consists of the mobile app and administrative console. There's no need for middleware between your mobile devices and host.

Enhance Your Legacy Mobile Web Apps

Velocity is your pathway to bring existing Wavelink Industrial Browser applications to touchscreen devices and the Android operating system. Running Naurtech CETerm? No problem! Velocity takes those apps forward with ease.
